Electronic Interference Reports Made to UKMTO

Date Range 04 - 11 December 2025

- The highest concentrations levels of Interference were observed in the vicinity of Port Sudan.
- Across the Central Red Sea Region, the levels ranged from moderate to low. The lowest levels were seen in the vicinities of Bander e-Pars, Dubai, Fujairah and Mubarak Al Kabeer Port (Kuwait).
- Since 06 November, only one direct report of GNSS Interference has been received. As per previous weeks, this suggests a continued lack of compliance from vessels in the area.
- **For reference:** HexBin colours – Red (>100) = Critical, Amber(100->50) = Severe, Yellow (50->25) = Moderate and Green = Low (25->5), <5 is discounted.
- There has been a slight change in methodology of AIS Speed Anomalies extraction, which allows all anomalous tracks to be extracted, the positions are then filtered to exclude those on land so anomalous positions are contained within sea areas.
- ***All Vessels are requested to report any experience of electronic interference to UKMTO, in support of keeping the broader community more accurately informed.***

Open Source Media Articles

(UKMTO is not responsible for the accuracy of these open source media articles)

- Pakistan Navy foils drug-smuggling attempt, seizes nearly \$3m worth of hashish in Arabian Sea.
