

Joint Maritime Information Center

Update 026 to JMIC Advisory Note: 01 - 31 March 2026

Regional Tension - Impact on Maritime Security _C

Area of Concern:

Middle East Maritime Region

JMIC# 001-26

Regional Threat Level: **CRITICAL**

1. Regional Risk Level Assessment

Overall Maritime Risk Level: ● **CRITICAL**

JMIC Threat Scale: ● Low | ● Moderate | ● Substantial | ● Severe | ● Critical

The regional maritime threat environment across the **Arabian Gulf, Strait of Hormuz, and Gulf of Oman remains CRITICAL**. The overall maritime threat environment remains at a critical level due to recent attack patterns, continued navigation interference, and persistent operational disruption, to include port facilities, across the region.

The Bab el-Mandeb Strait and Gulf of Aden remain at a **MODERATE** threat level. While regional tensions and Houthi rhetoric toward commercial shipping continue, there have been no confirmed incidents affecting maritime traffic in the area. JMIC continues to monitor for any changes in the threat environment

Operational Indicators (31 March)

- Confirmed maritime attacks/incidents/suspicious activity since 1 March: **26**
- Vessel attacks past 48 hours: **0**
- Historical SoH traffic: **~138/day**
- Current observed SoH vessel traffic last 24 hours: **5 vessels**
- GNSS interference: **localized and sporadic; minor increase S Arabian Gulf last 24 hours**

Since the start of hostilities on 28 February, more than twenty five maritime incidents involving commercial vessels and offshore infrastructure have been reported across the Arabian Gulf, Strait of Hormuz, and Gulf of Oman. The incidents involve a wide range of vessel types and flag states, with no consistent pattern of Western ownership linkage, suggesting that the current strike pattern reflects a campaign aimed at broad maritime disruption rather than selective vessel targeting. Attacks may occur at anchorages, Ship-to-Ship (STS) operations, and port approaches. Commercial vessels operating within the critical threat area are strongly encouraged to maintain reporting contact with UKMTO.

AIS transmission remains governed by SOLAS regulations. Operators should review AIS transmission policies within their internal risk management frameworks while maintaining compliance with regulatory requirements. Mariners should also remain alert to the possibility of unexploded ordnance (UXO) aboard

affected vessels and treat any suspected projectile as extremely hazardous in accordance with BMP-MS guidance.

2. Industry Coordination & Maritime Security Planning (No Change)

Kinetic events persist in the Arabian Gulf, Strait of Hormuz, and Gulf of Oman.

When conditions permit, maritime industry stakeholders should anticipate a deliberate and methodical plan focused on ensuring safe and secure vessel movements. This planning effort will require time to coordinate across military, interagency, and industry. Simultaneously, military operations work to achieve conditions conducive to safe transits.

Mariners should continue to exercise extreme caution when operating in the Arabian Gulf, Strait of Hormuz, and Gulf of Oman. Risk of adversary attacks against commercial shipping remains high in these areas.

3. Confirmed Vessel Incidents – Past 48 Hours

Incident	Vessel	Status	Damage	Location
028-26	EXPRESS ROME, container vessel	Transiting Eastbound	2 missiles splash into the water approximately 50 – 100 meters on the starboard side of the vessel. No damage and crew are safe	22NM from the coast of Saudi Arabia.
029-26	AL SALMI, crude oil tanker	Stationary	Vessel was hit by an unknown projectile. There was a fire located in the STBD side cargo tank, fire was extinguished. Crew safe.	31NM from the coast of United Arab Emirates

0 confirmed vessel attack reported during this reporting period.

4. Confirmed/known Marine infrastructure attacks last 48 hours (No Change)

There have been no reported attack on ports or maritime infrastructure in the last 48 hours. **SUBSTANTIAL** threats persist to port infrastructure in countries bordering the Arabian Gulf, Strait of Hormuz and Gulf of Oman.

Commercial operators should ensure they obtain the latest port status updates and operational advisories from local agents, terminal operators, and relevant authorities prior to planning or executing port calls in the region.

5. Port & Anchorage Congestion Risk (No Change)

A high concentration of vessels remain at anchor, drifting, or alongside in Arabian Gulf ports. Congestion is further complicated by EMI, AIS anomalies, and GNSS interference, increasing the risk of navigational hazards such as limited maneuvering space, anchor dragging, and collision.

Vessels are advised to minimize time spent pier-side or at anchor within high-risk areas. Maintaining movement and avoiding predictable patterns remains an important mitigation measure.

6. Strait of Hormuz Traffic Assessment

Historically average daily transit through the Strait of Hormuz is approximately **138 vessels per day**.

AIS-derived monitoring indicates that commercial traffic through the Strait of Hormuz remains extremely limited, with **six (6) transits on 29th March, and five (5) 30th March.**

VESSEL TRANSITS COMPARISON

CARGO VESSEL TRANSITS COMPARISON 24 to 30 MARCH 2026

BAM Total	11	8	15	9	13	13	14

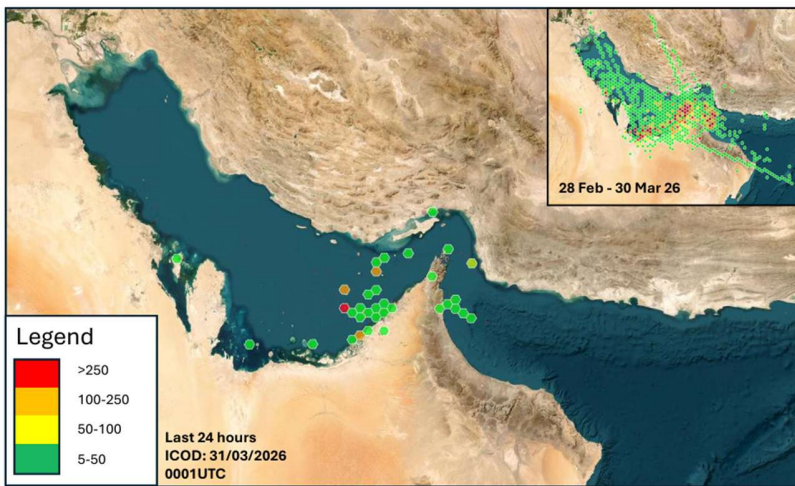

Source: S&P. Data based on cargo carrying vessels 1000 GT and above **transmitting AIS**

Note: AIS-derived transit figures represent only vessels actively transmitting AIS and may not capture vessels operating with AIS disabled or affected by GNSS disruption. Actual transit volumes may therefore vary from observed figures.

7. GNSS / GPS Interference Environment

GNSS, GPS, and AIS interference activity has moderated over the past 24–48 hours, with observed effects now assessed as sporadic and localized. While some improvement has been noted in recent days, interference continues to be reported across the Strait of Hormuz approaches, Gulf of Oman, and the Arabian Gulf. Areas of degraded positional reliability remain primarily concentrated in the Strait of Hormuz approaches and adjacent Omani and UAE waters. AIS anomaly mapping continues to indicate low-density secondary interference patterns extending into the Central Red Sea and both Suez Canal approaches. In the Gulf of Aden, Bab el-Mandeb, lower-intensity GNSS interference persists in the Gulf of Aden compared with the southern approaches to the Suez-canal. Disruptions are sporadic and rudimentary, with only intermittent signal degradation and minimal false-track formation reported.

NOTE: Graphics current as of March 31.

Personal mobile phone use in the Middle East conflict environment presents a significant OPSEC risk. Mobile devices generate persistent geolocation data via cellular networks and applications, which can be exploited through network-level vulnerabilities or compromised commercial apps. Historical activity confirms successful tracking of individuals. Vessels operating in or near conflict zones should consider vulnerabilities associated with mobile-device use, to include disabling non-essential services, and treating all location-enabled applications as potential exposure points.

Recommended Measures:

- Cross-check GNSS position with radar ranges, visual bearings, echo sounder trends, and parallel indexing where appropriate.
- Validate ECDIS and AIS inputs against secondary navigation sources and manual plotting where required.

- Increase bridge manning and enhanced vigilance in constrained waters, near anchorages, and during port approaches.
- Treat anomalous VHF calls, reported closures, or unexpected routing instructions cautiously and verify through recognized authorities.

8. War Risk Insurance Status – Elevated Market Posture (No Change)

The Joint War Committee (JWLA-033) expansion of Listed Areas across the Arabian Gulf, Gulf of Oman, and adjacent waters continues to trigger voyage declarations and Additional Premium negotiations under most Hull War policies. While commercial war risk insurance remains available, premiums have increased significantly and underwriting posture has tightened.

The U.S. government has indicated that additional war-risk insurance support mechanisms may be activated if required to sustain commercial shipping flows in the region. These mechanisms are intended to supplement the private insurance market and ensure continuity of maritime trade during periods of elevated conflict risk.

9. Outlook (24–48 Hours) (No Change)

The maritime threat environment **across the Arabian Gulf, Strait of Hormuz, and Gulf of Oman remains at CRITICAL** threat level. The conflict shows a rhythm, with recurring pulses designed to sustain psychological and economic pressure. Threats encompass a broader operational area within the Arabian Gulf, to include northern Gulf offshore transfer zones, anchorages, and approaches to ports. Offshore energy infrastructure and designated port facilities continue to face heightened exposure to standoff and asymmetric attacks.

Over the next 24–48 hours, the most credible threats encompass sustained UAV, USV, and missile engagements; potential follow-on or opportunistic strikes in proximity to recent incident sites, particularly coastal and offshore waters; and targeted attacks against static or predictably operating vessels, including ship-to-ship transfers and offshore installations. Regarding **Bab el-Mandeb Strait and Gulf of Aden**, despite current developments in Houthi rhetoric and attacks against on shore targets in Israel, there is no confirmed shift in the maritime threat environment. There is no verified evidence that Houthi forces have resumed attacks on commercial shipping; however, their direct entry into the conflict increases the likelihood of renewed maritime disruption across the Red Sea, Bab el-Mandeb Strait, and Gulf of Aden.

A. Strait of Hormuz and Arabian Gulf

The Strait of Hormuz and Arabian Gulf remain at a critical risk level. Events demonstrate hostile activity occurring across an expanded geographic footprint within the Arabian Gulf, extending well beyond the primary transit corridor of the Strait of Hormuz. Projectile strikes remain primary risk to merchant shipping. In addition to ongoing projectile, UAV, and USV threats, two new suspicious

incidents were reported on 30 March 2026: a tanker was struck by an unknown projectile near the Dubai port approaches and a container vessel reported two unknown projectiles impacting the water in close proximity, approximately 22 NM northeast of Ras Tanura. No change in pattern: low-cost kinetic attacks in chokepoints and coastal anchorages. Historical patterns indicate elevated vulnerability for vessels at anchor, adrift, or predictable routing and manoeuvring.

There is open-source reporting of mining in the Strait of Hormuz **however there remains no confirmation of mining in the SoH.**

Traffic observations are derived from AIS-based monitoring and should be interpreted as indicative rather than exhaustive.

B. Gulf of Oman and the Arabian Sea (No Change)

The Gulf of Oman and the Arabian Sea remain at **CRITICAL threat level**. Incidents include unidentified projectiles striking ships while transiting the region, particularly in the Strait of Hormuz and adjacent waters, affecting navigational and communication systems. The risk of "limpet mine" or USV attacks in regional terminals remains a significant concern for the energy sector. Limpet-style underwater attacks remain a historical risk pattern. International naval forces maintain a presence in the area.

C. Strait of Bab-el-Mandeb and Gulf of Aden

Bab el-Mandeb Strait and Gulf of Aden remain at MODERATE threat level. While the broader regional conflict continues to drive elevated tensions and Houthi forces maintain hostile rhetoric toward commercial shipping, there are no confirmed maritime attacks or security incidents reported in these areas during the reporting period. Current indicators reflect intent without demonstrated operational activity, warranting increased vigilance and continued monitoring, but do not meet the threshold for further threat level escalation at this time.

No verified Houthi attacks against commercial vessels have been confirmed since the escalation of hostilities on 28 February, though the group retains both the capability and intent to conduct maritime attacks in the region. Known threat vectors include anti-ship missiles, one-way attack UAVs, and uncrewed surface vessels (USVs). Houthi anti-ship missile, uncrewed aerial vehicle (UAV), and uncrewed surface vessel (USV) capabilities remain unchanged.

The pirate Action Group (PAG) reported ~400nm E Somalia is now under close surveillance by EUNAVFOR, ATALANTA and CTF-151. At present, it does not pose a threat to maritime transit. Mariners are advised to maintain a lookout and report suspicious activity. Mariners should maintain vigilance to guard against opportunistic armed robbery and piracy.

Commercial traffic through the Red Sea and Bab el-Mandeb Strait has returned to historical trends, with approximately 53 vessel transits recorded during the past 48 hours. Current BAM transits follow recent historical trends but remain reduced well below the historical baseline prior to Houthi attacks in November 2023.

Traffic observations are derived from AIS-based monitoring and should be interpreted as indicative rather than exhaustive.

D. Southern Red Sea (No Change)

Southern Red Sea is at MODERATE threat level No confirmed attacks, suspicious approaches, or reported incidents involving commercial vessels in the southern Red Sea, Bab el-Mandeb Strait, or adjacent Yemen/Saudi waters. Houthi posture remains threatening but with no indications of kinetic action, reaffirming intent rather than executing new action. Houthi leadership continues to communicate potential resumption of strikes on US/Israel-linked shipping amid the broader Iran conflict.

GNSS/GPS jamming and spoofing remain a consistent hazard across the region, with secondary interference patterns extending into the central Red Sea but lower intensity. GNSS interference remains a persistent residual risk.

E. Northern Red Sea and Suez Canal (No change)

Northern Red Sea is at MODERATE threat level No confirmed attacks, suspicious approaches, vessel strikes or reported incidents involving commercial shipping in the Northern Red Sea (including Gulf of Suez approaches), Suez Canal, or adjacent Egyptian waters has been reported. The Suez Canal Authority confirms operations continuing normally in both directions with no security incidents or disruptions to transit. Houthi forces retain a general “substantial” threat posture across the wider Red Sea, but no verified actions or escalations have affected northern sectors. Moderate to low direct threat.

No significant new spikes, widespread outages, or isolated incidents of GNSS/GPS jamming, spoofing, or communications blackouts were reported in the Northern Red Sea. Some anomalous interference activity was noted in vicinity of the Suez Canal in the last 24 hours. Secondary/lower-intensity GNSS interference patterns can occasionally extend into the broader Red Sea corridor (including historical AIS speed anomalies near Port Sudan). There were no vessel-reported comms blackouts specific to these waters.

F. Eastern Mediterranean Sea (No change)

Eastern Mediterranean Sea is at MODERATE threat level. In the Eastern Mediterranean, electromagnetic interference (EMI) continues to be reported around Cyprus and the Levant, coinciding with naval operations. While the overall risk to commercial shipping in the Eastern Mediterranean remains low, vessels operating close to shore should consider their proximity to ongoing kinetic activity on land.

There is increased naval presence in the region expected to continue as regional tensions persist. Mariners should exercise extreme caution and avoid loitering near military exclusion zones. Mariners are advised that military exclusion zones are being strictly enforced and a 30 nm standoff from all naval units is recommended to mitigate the high risk of misidentification.

There are no verified reports of:

- Missile or UAV attacks on commercial vessels in Eastern Mediterranean waters
- Mining or chokepoint denial activity

Analytical Note: //DISCLAIMER//

This advisory is based on currently available reporting, including maritime industry observations, open-source intelligence, and aggregated operational reporting from regional maritime stakeholders. Information remains subject to verification as additional data becomes available. Observed patterns and threat assessments represent the best current analytical judgment and should be interpreted as indicative of prevailing risk conditions rather than definitive prediction of future events.

JMIC will continue monitoring and issue updates as the situation warrants. The next JMIC update will be on **2** April.

Issued by: Joint Maritime Information Center (JMIC) in consultation with UKMTO & MSCIO

Notes

- Map reflects reported events to UKMTO since Saturday 28th Feb 2026
- No reported events on 2,5,8,9,15,17,20,22,23,24,25, 26,27,29 Mar 2026
- No reported events before 1 Mar 2026

Confirmed Maritime Security Incidents (01–31 March 2026)

Since 01 March 2026, at least 25 maritime security incidents involving commercial vessels and offshore infrastructure have been reported across the Arabian Gulf, Strait of Hormuz, and Gulf of Oman.

Date	Vessel	Vessel Type	Event Type	Location	Summary
01 Mar 2026 - UKMTO 004-36	SKYLIGHT	Tanker	Attack (serious)	Strait of Hormuz	Vessel struck by projectile while at anchor causing fire; crew evacuated with injuries reported.
01 Mar 2026 - UKMTO 006-36UKMTO 005-26	HERCULES STAR	Tanker	Attack (serious)	Strait of Hormuz	Vessel struck by projectile while transiting outbound; fire reported onboard.
01 Mar 2026 - UKMTO 006-26	OCEAN ELECTRA	Bulk	Attack	Arabian Gulf	Projectile detonated in close proximity while vessel was transiting westbound; no damage reported.
01 Mar 2026 - UKMTO 007-36	MKD VYOM	Tanker	Attack (serious)	Gulf of Oman	Vessel struck by projectile (USV) while transiting northbound causing fire; one fatality reported.
01 Mar 2026 - UKMTO 008-26	STENA IMPERATIVE	Tanker	Attack (serious)	Bahrain	Vessel struck by two projectiles while in drydock causing fire and damage.
03 Mar 2026 - UKMTO 009-26	PELAGIA	Bulk	Near Miss	Gulf of Oman	UAV observed near vessel before impacting water nearby; no damage reported.

03 Mar 2026 - UKMTO 010-26	GOLD OAK	Bulk	Attack (serious)	Gulf of Oman	Vessel struck by projectile while at anchor causing structural damage; crew safe.
03 Mar 2026 - UKMTO 011-26	LIBRA TRADER	Tanker	Attack (serious)	Gulf of Oman	Vessel struck by projectile while anchored; damage reported.
04 Mar 2026 - UKMTO 012-26	SAFEEN PRESTIGE	Container	Attack (serious)	Strait of Hormuz	Explosion was reported near stern following approach by small craft; crew abandoned vessel.
04 Mar 2026 - UKMTO 013-26	MSC GRACE	Container	Near Miss	Arabian Gulf	Projectile detonated approximately 1 NM from vessel while drifting.
04 Mar 2026 - UKMTO 014-26	SONANGOL NAMIBE	Tanker	Attack (serious)	Northern Arabian Gulf	Explosion onboard causing cargo hold damage and oil leakage.
06 Mar 2026 - UKMTO 015-26	MUSSAFAH 2	Tug	Attack (serious)	Strait of Hormuz	Vessel struck by projectiles while supporting operations with SAFEEN PRESTIGE.
07 Mar 2026 - UKMTO 016-26	ARABIA III	Offshore Rig	Attack (serious)	Arabian Gulf	Drilling rig struck by UAV causing injuries and evacuation of personnel.
10 Mar 2026 - UKMTO 017-26	GH KAHLO	Bulk	Near Miss	Arabian Gulf	The Master reports witnessing a splash and hearing a loud bang in close proximity of a bulk carrier.

10 Mar 2026 - UKMTO 018-26	ONE MAJESTY	Container	Attack (serious)	Arabian Gulf	Vessel struck by projectile at stern causing possible structural damage.
11 Mar 2026 - UKMTO 019-26	MAYUREE NAREE	Bulk Carrier	Attack (serious)	Strait of Hormuz	Projectile strike resulted in engine room fire; crew evacuated by Omani Coast Guard.
11 Mar 2026 - UKMTO 020-26	STAR GWYNETH	Bulk Carrier	Attack (serious)	Arabian Gulf	Projectile strike caused breach in cargo hold and adjacent ballast tanks resulting in listing.
11 Mar 2026 - UKMTO 021-26	SAFESEA VISHNU	Tanker	Attack (serious)	Northern Arabian Gulf (STS area)	Struck by projectile while conducting STS operations; fire onboard and casualty reported.
11 Mar 2026 - UKMTO 021-26	ZEFYROS	Tanker	Attack (serious)	Northern Arabian Gulf (STS area)	Struck by projectile during STS operations causing significant fire.
12 Mar 2026 - UKMTO 022-26	SOURCE BLESSING	Container	Attack	Arabian Gulf (North of Jebel Ali)	Projectile struck accommodation block causing fire; crew safe.
17 Mar 2026 - UKMTO 023-26	Name withheld UFN	LPG Carrier	Suspicious activity	Approx 23 NM of the coast of UAE	Vessel was subjected to falling debris from drone or Missile Interception minor structural damage, no fire; crew safe.
18 Mar 2026 UKMTO 024-26	Name withheld UFN	Chemical products tanker	Attack	Vessel in TTW of UAE, 11NM off the coast	Hit by unknown projectile and caught fire. Crew of 16, 15 rescued and one crew member unaccounted for.

19 Mar 2026 UKMTO 025-26	Name withheld UFN	Tug, Multipurpose Offshore vessel	Suspicious activity	Inner anchorage at Ras Laffan Port, approx 4 NM out.	Debris from a drone impacted on board, resulting in damage to the bridge window. No injuries to personnel and no structural damage to the vessel have been reported.
21 Mar 2026 UKMTO 026-26	Name withheld UFN	Bulk carrier	Suspicious activity	Arabian Gulf, approx 12 NM from the coast of UAE.	Vessel crew heard an explosion and observed a fire for a short period approx 1300 meters from vessel, crew of 24 safe.
30 Mar 2026 UKMTO 028-26	EXPRESS ROME	Container	Suspicious activity	Transiting eastbound through the Arabian Gulf, 22NM from the coast of Saudi Arabia	2 missiles splash into the water approximately 50 – 100 meters on the starboard side of the vessel. No damage and all crew are safe
30 Mar 2026 UKMTO 029-26	AI SALMI	Crude oil Tanker	Suspicious activity	Stationary, 31NM from the coast of UAE, Arabian Gulf.	Vessel was hit by an unknown projectile. There was a fire located in the STBD side cargo tank, fire was extinguished. Crew safe.
